About the Uniform Crime Reporting (UCR) Program

The FBI’s UCR Program is a nationwide, cooperative statistical effort of more than 18,000 city, university and college, county, state, tribal, and federal law enforcement agencies voluntarily reporting data on crimes brought to their attention. Since 1930, the FBI has administered the UCR Program and has continued to assess and monitor the nature and type of crime in the nation. The program’s primary objective is to generate reliable information for use in law enforcement administration, operation, and management; over the years, however, the data have become one of the country’s leading social indicators. Criminologists, sociologists, legislators, municipal planners, the media, and other students of criminal justice use the data for varied research and planning purposes.

Currently the UCR Program is comprised of four subprograms: the Summary Reporting System (SRS), the National Incident-Based Reporting System (NIBRS), the Law Enforcement Officers Killed and Assaulted (LEOKA) Program, and the Hate Crime Statistics Program. In addition to annual reports for these data collections, the UCR Program publishes a preliminary semiannual report of summary data each winter, as well as special compilations of data as available, e.g., cargo theft, human trafficking, and NIBRS topical studies.

In 2014, law enforcement agencies active in the UCR Program represented more than 311 million United States inhabitants (97.7 percent of the total population). The coverage amounted to 98.6 percent of the population in Metropolitan Statistical Areas, 91.6 percent of the population in cities outside metropolitan areas, and 92.6 percent of the population in nonmetropolitan counties.

UCR advisory groups

The Criminal Justice Information Systems Committees of the International Association of Chiefs of Police (IACP) and the National Sheriffs’ Association (NSA) provide vital links between local law enforcement and the FBI in the oversight of the UCR Program. The IACP, representing the thousands of police departments nationwide, and the NSA, serving sheriffs throughout the country, encourage agencies to participate fully in the program. Both committees fulfill advisory capacities concerning the UCR Program’s operation.

In 1988, a Data Providers’ Advisory Policy Board was established to provide input for UCR matters. That board operated until 1993 when it combined with the National Crime Information Center Advisory Policy Board to form a single Advisory Policy Board (APB) to address all issues regarding the FBI’s criminal justice information services. The current APB ensures a continued
emphasis on UCR-related issues. In addition, the Association of State UCR Programs (ASUCRP) focuses on UCR issues within individual state law enforcement associations and promotes interest in the UCR Program. These organizations foster widespread and responsible use of uniform crime statistics and lend assistance to data contributors when needed.

Historical background of UCR

Recognizing a need for national crime statistics, the IACP formed the Committee on Uniform Crime Records in the 1920s to develop a system of uniform crime statistics. After studying state criminal codes and making an evaluation of the recordkeeping practices in use, the committee completed a plan for crime reporting that became the foundation of the UCR Program in 1929. The plan included standardized offense definitions for seven main offense classifications known as Part I crimes to gauge fluctuations in the overall volume and rate of crime. Developers also instituted the Hierarchy Rule as the main reporting procedure for what is now known as the SRS of the UCR Program.

The seven Part I offense classifications included the violent crimes of murder and nonnegligent manslaughter, rape, robbery, and aggravated assault as well as the property crimes of burglary, larceny-theft, and motor vehicle theft. By congressional mandate, arson was added as a Part I offense category in 1979, and human trafficking/commercial sex acts and human trafficking/involuntary servitude were added as Part I offenses in 2013.

The FBI becomes clearinghouse for crime data

In January 1930, 400 cities representing 20 million inhabitants in 43 states began participating in the UCR Program. That same year, Congress enacted Title 28, Section 534, of the United States Code authorizing the Attorney General to gather crime information. The Attorney General, in turn, designated the FBI to serve as the national clearinghouse for the crime data collected. Every year since, data based on uniform classifications and procedures for reporting offenses and arrests have been obtained from the nation’s law enforcement agencies.

LEOKA Program emerges in UCR

Beginning in 1937, the FBI’s UCR Program collected and published statistics on law enforcement officers killed in the line of duty in its annual publication, Crime in the United States. Statistics regarding assaults on officers were added in 1960. In June 1971, executives from the law enforcement conference, “Prevention of Police Killings,” called for an increase in the FBI’s involvement in preventing and investigating officers’ deaths. In response to this directive, the UCR Program expanded its collection of data to include more details about the incidents in which law enforcement officers were killed and assaulted.
Using this comprehensive set of data, the FBI began in 1972 to produce two reports annually, the *Law Enforcement Officers Killed Summary* and the *Analysis of Assaults on Federal Officers*. These two reports were combined in 1982 to create the annual publication, *Law Enforcement Officers Killed and Assaulted*.

**Redesign of UCR**

Although the data collected and disseminated by the UCR Program remained virtually unchanged throughout the years, in the 1980s, a broad utility had evolved for UCR. Recognizing the need for improved statistics, law enforcement called for a thorough evaluative study to modernize the UCR Program. The FBI concurred with the need for an updated program and lent its complete support, formulating a comprehensive three phase redesign effort. The first two phases of this effort, guided by input from representatives of the FBI, the Bureau of Justice Statistics (BJS), the IACP, and the NSA, culminated with the release of a comprehensive report.

The final report, the *Blueprint for the Future of the Uniform Crime Reporting Program* (*Blueprint*), was released in May 1985. It specifically outlined three areas of enhancement to help the UCR Program meet future informational needs. First, agencies would use an incident-based system to report offenses and arrests. Second, the national UCR Program would collect data on two levels (i.e., limited and full participation), and third, the national UCR Program would introduce a quality assurance program.

In January 1986, the FBI began phase III of the redesign effort guided by the general recommendations set forth in the *Blueprint*. Contractors developed new data guidelines and system specifications while the FBI studied various state systems to select an experimental site to implement the redesigned program. Upon selecting the South Carolina Law Enforcement Division (SLED), which enlisted the cooperation of nine local law enforcement agencies, the FBI developed automated data capture specifications to adapt the SLED’s state system to the national UCR Program’s standards, and the BJS funded the revisions. The pilot demonstration ran March 1–September 30, 1987, and resulted in further refinement of the guidelines and specifications.

March 1–3, 1988, the FBI held a National UCR Conference to present the new system to law enforcement and to obtain feedback on its acceptability. Attendees of the National UCR Conference passed three overall recommendations without dissent: first, that there be established a new, incident-based national crime reporting system; second, that the FBI manage this program; and third, that an APB composed of law enforcement executives be formed to assist in directing and implementing the new program. Furthermore, attendees
recommended that the implementation of national incident-based reporting proceed at a pace commensurate with the resources and limitations of contributing law enforcement agencies.

**Establishing the NIBRS**

From March 1988 through January 1989, the FBI proceeded in developing and assuming management of the UCR Program’s NIBRS, and by April 1989, the national UCR Program received the first test submission of NIBRS data. Over the course of the next few years, the national UCR Program published information about the redesigned program in five documents. The handbook and its four associated volumes provided the definitions, policies, and procedures of NIBRS; the offense codes, reports, data elements, and data values used in the system; explanations of mandatory and optional data elements, data element edits, and error messages; data submission specifications; and approaches for implementing an incident-based system.

Originally designed with 52 data elements, NIBRS currently captures up to 58 data elements via six types of data segments: administrative, offense, victim, property, offender, and arrestee. In the late 1980s, the FBI refrained from making any changes to NIBRS as data contributors implemented the system. However, modifications have become necessary over time. Accordingly, the system’s flexibility has allowed for the collection of additional information to be captured within an incident: bias-motivated offenses (1990), the presence of gang activity (1997), data for law enforcement officers killed and assaulted (2003), data on cargo theft (2005), and offender ethnicity (2013). It has also permitted the addition of new codes to further specify location types and property types (2010). Beginning in 2016, NIBRS will include the collection of animal cruelty data as well as the two new fraud offenses of identity theft and hacking/computer invasion.

The FBI began accepting NIBRS data from a handful of agencies in January 1989. As more contributing law enforcement agencies became educated about the rich data available through incident-based reporting and as resources permitted, more agencies implemented NIBRS. Based on 2014 data submissions, 16 states submit all their data via NIBRS, and 33 state UCR Programs are certified for NIBRS participation.
For several years, the UCR Program has maintained its long-running time series of data via the submissions of both Summary and NIBRS contributors. Though the FBI continues to convert NIBRS data to provide equivalent Summary statistics for the annual publication *Crime in the United States*, the FBI established an annual NIBRS publication beginning with the 2011 data. It has also published a number of monographs to demonstrate the utility of NIBRS data and has made available NIBRS master files for those interested in studying them.

**Hate Crime Statistics Program established**

On April 23, 1990, Congress passed the Hate Crime Statistics Act, 28 U.S.C. § 534, which required the Attorney General to collect data “about crimes that manifest evidence of prejudice based on race, religion, sexual orientation, or ethnicity.” The Attorney General delegated the responsibilities of developing the procedures for implementing, collecting, and managing hate crime data to the Director of the FBI, who, in turn, assigned the tasks to the UCR Program. Under the direction of the Attorney General and with the cooperation and assistance of many local and state law enforcement agencies, the UCR Program began collecting hate crime data to comply with the congressional mandate.

The UCR Program’s first publication on the subject was *Hate Crime Statistics, 1990: A Resource Book*, which was a compilation of hate crime data reported by 11 states that had collected the information under state authority in 1990 and were willing to offer their data as a prototype. The UCR Program continued to work with agencies familiar with investigating hate crimes and collecting related information so that it could develop and implement a more uniform method of data collection on a nationwide scale. *Hate Crime Statistics, 1992*, presented the first published data reported by law enforcement agencies across the country that participated in the UCR Hate Crime Statistics Program. Years later, with a number of changes in the data collection due to subsequent legislation, the Hate Crime Statistics Program continues to report annually on the nature and frequency of crime motivated by offenders’ bias against race, gender, gender identity, religion, disability, sexual orientation, and ethnicity.

**Major Changes within the UCR Program**

*Suspension of the Crime Index and Modified Crime Index in the SRS*

In June 2004, the CJIS APB approved discontinuing the use of the Crime Index in the UCR Program and its publications, and it directed the FBI to publish a violent crime total and a property crime total. The Crime Index, first published in *Crime in the United States* in 1960, was the title used for a simple aggregation of the seven main offense classifications (Part I offenses) in the SRS. The Modified Crime Index was the number of Crime Index offenses plus arson.
For several years, the CJIS Division studied the appropriateness and usefulness of these indices and brought the matter before many advisory groups including the UCR Subcommittee of the CJIS APB, the ASUCRP, and a meeting of leading criminologists and sociologists hosted by the BJS. The prevailing opinion of the advisory groups was that the Crime Index and the Modified Crime Index were not true indicators of the degrees of criminality because they were always driven upward by the offense with the highest number, typically larceny-theft. The sheer volume of those offenses overshadowed more serious but less frequently committed offenses, creating a bias against a jurisdiction with a high number of larceny-thefts but a low number of other serious crimes such as murder and rape.

**Move to exclusively electronic publication**

Following decades of making hard copies of its annual reports available, the FBI began electronically publishing the main publications of its annual UCR series. As technology expanded and more data users accessed information online, the FBI discontinued the printed versions of *Crime in the United States*, *Law Enforcement Officers Killed and Assaulted*, and *Hate Crime Statistics* in 2006.

**Collection of Human Trafficking data**

In response to the William Wilberforce Trafficking Victims Protection Reauthorization Act of 2008, the FBI began accepting data on human trafficking (commercial sex acts, involuntary servitude, and purchasing prostitution) in January 2013. The national UCR Program staff continues to refine its data collection methods and to encourage agencies to submit related data.

**Change to the definition of rape**

At the fall 2011 CJIS APB meeting, the APB recommended, and then-FBI Director Robert Mueller III approved, changing the definition of rape. Since 1929, in the SRS, forcible rape had been defined as “the carnal knowledge of a female forcibly and against her will,” (UCR Handbook, 2004, p. 19). Beginning with the 2013 data collection, the SRS definition for the violent crime of rape was modified to:

“Penetration, no matter how slight, of the vagina or anus with any body part or object, or oral penetration by a sex organ of another person, without the consent of the victim.”

This definition can be found in the *Summary Reporting System [SRS] User Manual*, Version 1.0 dated June 20, 2013.
The FBI developed reporting options for law enforcement agencies to meet this requirement which were built into the redeveloped data collection system.

In addition to approving the new definition of rape for the SRS, the APB and then-Director Mueller approved removing the word “forcible” from the name of the offense and also replacing the phrase “against the person’s will” with “without the consent of the victim” in other sex-related offenses in NIBRS, the Hate Crime Statistics Program, and Cargo Theft. For trending purposes, the UCR Program currently converts the NIBRS offenses of rape, sodomy, and sexual assault with an object to the SRS revised definition of rape for publication in Crime in the United States. However, the program publishes the sex offense data in the annual NIBRS report as submitted by law enforcement.

**Revision of Race and Ethnicity Categories**

In response to a directive by the U.S. Government’s Office of Management and Budget, the national UCR Program has expanded its data collection categories for race from four (White, Black, American Indian or Alaska Native, and Asian or Other Pacific Islander) to five (White, Black or African American, American Indian or Alaska Native, Asian, and Native Hawaiian or Other Pacific Islander). Also, the ethnicity categories have changed from “Hispanic” and “Non-Hispanic” to “Hispanic or Latino” and “Not Hispanic or Latino.” These changes are reflected in data beginning in 2013.

**Changes in Collecting Data for Bias-Motivated Offenses**

In response to the Matthew Shepard and James Byrd, Jr. Hate Crimes Prevention Act of 2009 (Shepard/Byrd Act), the FBI began accepting data on crimes motivated by gender (male and female) bias and gender-identity (transgender and gender nonconforming) bias through NIBRS and hate crime submissions in 2013. The FBI also began using the revised the sexual-orientation bias types of anti-gay (male); anti-lesbian; anti-lesbian, gay, bisexual, and transgender (mixed group); anti-heterosexual; and anti-bisexual. In addition, the national UCR Program began permitting law enforcement agencies to report four additional bias types per offense instead of only one.

**Recent developments**

To improve the nation’s crime statistics, Director James B. Comey has committed the UCR Program to focusing its efforts on getting richer, more complete data. To achieve this goal, he and the staff of the national UCR Program have been working diligently with law enforcement at all levels through a four-pronged plan. The FBI’s plan to achieve this goal for the UCR Program is to:
• Transition local, state, and tribal law enforcement agencies from the SRS to NIBRS. With the help of their UCR advisory groups, the FBI plans to fully implement a NIBRS-only collection at the national level in the near future and to retire the traditional SRS. Although an exact timeline has not been established yet, the National Crime Statistics Exchange (NCS-X) Project with the BJS will bolster NIBRS participation by 400 agencies.

• Collect use of force statistics on all officer-involved incidents (fatal and nonfatal) at the local, state, tribal, and federal levels. The national UCR Program staff are currently working with local law enforcement agencies and major national law enforcement organizations to determine what information to collect and the best collection method.

• Fulfill FBI participation in the UCR Program as a federal contributor. To comply with the Uniform Federal Crime Reporting Act of 1988, the FBI reported arrest data from its field offices for human trafficking, hate crimes, and criminal cyber intrusion for 2014. Effective January 1, 2016, the national UCR Program plans to begin collecting arrest data by FBI field office for all applicable UCR offenses and to publish these data in the fall of 2017.

• Encourage the Department of Justice (DOJ) and other federal agencies to participate in the UCR Program. Through their contacts with other federal agencies, UCR Program staff are assessing the federal agencies’ record keeping systems and working to establish individualized plans to assist them in submitting UCR data.

UCR Redevelopment Project update

The staff members of the UCR Redevelopment Project (UCRRP) are working to improve the efficiency, usability, and maintainability of the UCR Program’s submission processes, databases, and quality control activities. Through the UCRRP, the UCR Program will improve customer service by decreasing the time it takes to analyze data and by decreasing the time needed to release and publish crime data. The program will also enhance its crime data explorer so that the public can view and analyze more published UCR data from the Internet.

Another major goal of the UCRRP is to eliminate the exchange of printed materials between submitting agencies and the FBI. The UCR Program no longer accepts paper submissions or the electronic submission of documents (i.e., Portable Document Format files). Although the UCR Program currently accepts SRS and NIBRS flat files, program staff are working with agencies to help move toward electronic submissions via NIBRS Extensible Markup Language (XML).
