

Data Declaration

Table 29

Estimated Number of Arrests, United States, 2019

The FBI collects these data through the Uniform Crime Reporting (UCR) Program.

Important note about rape data

In 2013, the FBI's UCR Program initiated the collection of rape data under a revised definition within the Summary Reporting System. The term "forcible" was removed from the offense name, and the definition was changed to "penetration, no matter how slight, of the vagina or anus with any body part or object, or oral penetration by a sex organ of another person, without the consent of the victim."

In 2016, the FBI Director approved the recommendation to discontinue the reporting of rape data using the UCR legacy definition beginning in 2017.

General comments

This table provides the estimated number of persons arrested in the United States in 2019.

Methodology

- The data used in creating the national estimates for this table were from all law enforcement agencies submitting 12 months of arrest data for 2019.
- The rape figures in this table are aggregate totals of data submitted using both the legacy and revised UCR definitions of rape.

Arrest estimation

- The arrest totals presented are national estimates based on the arrest rates of all law enforcement agencies submitting a complete year of arrest data to the UCR Program.
- The total estimated number of arrests in this table is the sum of estimated arrest volumes for 27 offenses, excluding suspicion.
- The arrest data for each of the individual offenses in this table is the sum of the estimated volume for that offense within each of the eight population groups. (See Area Definitions.)
- The FBI calculated arrest rates using data from all law enforcement agencies submitting a complete year of arrest data (i.e., complete reporters), then multiplying this complete-response arrest rate by the total population (including those of incomplete and nonreporters) in each arrest offense and population group and then multiplying by 100,000 for each arrest offense.
- Arrest data is not imputed and then aggregated to the national level. The FBI's UCR Program does not impute missing arrest data from either nonreporting or partially reporting jurisdictions. Published estimates are based only on data from those jurisdictions submitting 12 months of arrest data because the arrests from partial and incomplete reporting agencies are excluded from the rate calculation.
