

Methodology

UCR Programs gather crime information from the law enforcement agencies under their domain and forward the data to the FBI. Forty-nine states in the nation have their own UCR Programs that streamline the collection of UCR data from local law enforcement agencies, ensure consistency and comparability of data, and provide a higher quality of service to the law enforcement community. Establishment of a UCR Program is not limited to state governments. Territorial, tribal, and federal agencies may also institute UCR Programs. Agencies in states without a program, i.e., direct contributors, submit their crime statistics directly to the FBI, which provides continuous guidance and support to those participating agencies.

Criteria for UCR Programs

The following are the standards under which a UCR Program must operate:

- 1. A UCR Program must conform to the FBI UCR Program's submission standards, definitions, specifications, and required deadlines.
- 2. A UCR Program must establish data integrity procedures and have personnel assigned to assist contributing agencies in quality assurance practices and crime reporting procedures. Data integrity procedures should include crime trend assessments, offense classification verification, and technical specification validation.
- 3. A UCR Program's submissions must cover more than 50 percent of the law enforcement agencies within its established reporting domain and be willing to cover any and all UCR-contributing agencies that wish to use the UCR Program from within its domain. (An agency wishing to become a UCR Program must be willing to report for all of the agencies within the state.)

Crime in the United States, 2019

4. A UCR Program must furnish the FBI UCR Program with all of the UCR data collected by the law enforcement agencies within its domain.

These requirements do not prohibit the state from gathering other statistical data beyond the national collection.

Data completeness and quality

In order to fulfill its responsibilities in connection with the UCR Program, the FBI edits and reviews individual agency reports for both completeness and quality. Members of the national program's staff contact the state UCR Program in connection with crimereporting matters and, as necessary, when approved by the state, individual contributors. Upon request, staff members conduct training programs within the state on law enforcement record-keeping and crime-reporting procedures. Following audit standards established by the federal government, the FBI conducts an audit of each state's UCR data collection procedures once every 3 years. Should circumstances develop whereby the state program does not comply with the aforementioned requirements, the national program may institute a direct collection of data from law enforcement agencies within the state.

Reporting procedures

Offenses known and value of property—Law enforcement agencies tabulate the number of Part I offenses brought to their attention based on records of all reports of crime received from victims, officers who discover infractions, or other sources, and submit them each month to the FBI either directly or through their state UCR Programs. Part I offenses include murder and nonnegligent manslaughter, rape, robbery, aggravated assault, burglary, larceny-theft, motor vehicle theft, and arson. Law enforcement agencies also submit monthly to the FBI the value of property stolen and recovered in connection with the offenses and detailed information pertaining to criminal homicide.

Unfounded offenses and clearances—When, through investigation, an agency determines that complaints of crimes are unfounded or false, the agency eliminates that offense from its crime tally through an entry on the monthly report. The report also provides the total number of actual Part I offenses, the number of offenses cleared, and the number of clearances that involve only offenders under the age of 18. (Law enforcement can clear crimes in one of two ways: by the arrest of at least one person who is

charged and turned over to the court for prosecution or by exceptional means—when some element beyond law enforcement's control precludes the arrest of a known offender.)

Persons arrested—In addition to reporting Part I offenses, law enforcement agencies provide monthly to the UCR Program data on the age, sex, race, and ethnicity of persons arrested for Part I and Part II offenses. Part II offenses encompass all crimes, except traffic violations, that are not classified as Part I offenses.

Officers killed or assaulted, and law enforcement employment—Law enforcement agencies also report monthly to the UCR Program information regarding law enforcement officers killed or assaulted, and yearly, the number of full-time sworn and civilian law enforcement personnel employed as of October 31.

Hate crimes—At the end of each quarter, law enforcement agencies report summarized data on hate crimes, i.e., specific offenses that were motivated by an offender's bias against the perceived race, gender and gender identity, religion, disability, ethnic/national origin, sexual orientation, or ethnicity of the victim. Those agencies participating in the UCR Program's National Incident-Based Reporting System (NIBRS) submit hate crime data monthly.

Editing procedures

The UCR Program thoroughly examines each report it receives for arithmetical accuracy and for deviations in crime data from month to month and from present to past years' data that may indicate errors. The UCR staff members compare aggregated data from agencies of similar population size to identify any unusual fluctuations in an agency's crime counts. Large variations in crime levels may indicate modified records procedures, incomplete reporting, or changes in the jurisdiction's geopolitical structure.

Evaluation of trends—Data reliability is a high priority of the FBI, which brings any deviations or arithmetical adjustments to the attention of state UCR Programs or the submitting agencies. Typically, FBI staff members study the monthly reports to evaluate periodic trends prepared for individual reporting units. Any significant increase or decrease becomes the subject of a special inquiry. Changes in crime reporting procedures or annexations that affect an agency's jurisdiction can influence the level of reported crime. When this occurs, the FBI excludes the figures for specific crime categories or totals, if necessary, from the trend tabulations.

Training for contributors—In addition to the evaluation of trends, the FBI provides training seminars and instructional materials on crime reporting procedures to assist contributors in complying with UCR standards. Throughout the country, the national program maintains liaison with state UCR Programs and law enforcement personnel and holds training sessions to explain the purpose of the program, the rules of uniform classification and scoring, and the methods of assembling the information for reporting. When an individual agency has specific problems in compiling its crime statistics and its remedial efforts are unsuccessful, personnel from the FBI's Criminal Justice Information Services Division may visit the contributor to aid in resolving the difficulties.

Summary Reporting System User Manual—The national UCR Program published the *Summary Reporting System (SRS) User Manual* (June 20, 2013) which details procedures for classifying and scoring offenses and serves as the contributing agencies' basic resource for preparing reports. The national staff also produces correspondence to UCR contributors as needed and the UCR Program Quarterly. These provide policy updates and new information, as well as clarification of reporting issues.

The final responsibility for data submissions rests with the individual contributing law enforcement agency. Although the FBI makes every effort through its editing procedures, training practices, and correspondence to ensure the validity of the data it receives, the accuracy of the statistics depends primarily on the adherence of each contributor to the established standards of reporting. Deviations from these established standards that the national UCR Program cannot resolve may be brought to the attention of the Criminal Justice Information Systems Committees of the International Association of Chiefs of Police and the National Sheriffs' Association.

Population estimation

For the 2019 population estimates used in this table, the FBI computed individual rates of growth from one year to the next for every city/town and county using 2010 decennial population counts and 2011 through 2018 population estimates from the U.S. Census Bureau. Each agency's rates of growth were averaged; that average was then applied and added to its 2018 Census population estimate to derive the agency's 2019 population estimate.

Population totals for 2000 and 2010 are from the U.S. Census Bureau's decennial population counts.

NIBRS conversion

Forty-two state programs are certified to provide their UCR data in the expanded NIBRS format. For presentation in this publication, the NIBRS data were converted to the historical SRS data. The UCR Program staff constructed the NIBRS database to allow for such conversion so that UCR's long-running time series could continue.

Crime trends

By showing fluctuations from year to year, trend statistics offer the data user an added perspective from which to study crime. Percent change tabulations in this publication are computed only for reporting agencies that provided comparable data for the periods under consideration. The FBI excludes from the trend calculations all figures except those received for common months from common agencies. Also excluded are unusual fluctuations of data that the FBI determines are the result of such variables as improved records procedures, annexations, etc.

Publication Annotation

Narrative portions of this publication present percentage breakdowns for various facets of tabular data. Where percentage breakdowns are used, percentages may not add to 100.0 percent due to rounding.

Caution to users

Data users should exercise care in making any direct comparison between data in this publication and those in prior issues of Crime in the United States. Because of differing levels of participation from year to year and reporting problems that require the FBI to estimate crime counts for certain contributors, some data may not be comparable from year to year. In addition, this publication may contain updates to data provided in prior years' publications. For example, because of the receipt of additional data after the 2018 publication deadline, the 2018 Supplementary Homicide Report (SHR) data in that publication may not match the 2018 SHR data in this 2019 publication.

2019 arrest data considerations

- No 2019 arrest data were received from the District of Columbia's Metropolitan Police Department. The two agencies in the District of Columbia for which 12 months of arrest data were received, the District of Columbia Fire and Emergency Medical Services: Arson Investigation Unit, and the Metro Transit Police, have no attributable population.
- For 2019, only arrest totals (with no age or gender breakdowns) are available for Florida. Therefore, Florida arrest totals are included only in Table 69, "Arrests by State, 2019."
- Limited arrest data were received from the Illinois state UCR Program. (Arrest counts presented in Table 69, "Arrests by State, 2019" are for Rockford only.)
- No 2019 arrest data were received from the New York City Police Department. However, arrest totals for this agency were estimated by the national UCR Program and were included in Table 29 "Estimated Number of Arrests, United States, 2019."

Offense estimation

Tables 1 through 5 and Table 7 of this publication contain statistics for the entire United States. Because not all law enforcement agencies provide data for complete reporting periods, the FBI includes estimated crime numbers in these national presentations. The FBI estimates data for three areas: Metropolitan Statistical Areas (MSAs), cities outside MSAs, and nonmetropolitan counties. The FBI computes estimates for participating agencies not providing 12 months of complete offense data. For agencies supplying 3 to 11 months of offense data, the national UCR Program estimates for the missing data by following a standard estimation procedure using the data provided by the agency. If an agency has supplied less than 3 months of data, the FBI computes estimates by using the known crime figures of similar areas within a state and assigning the same proportion of crime volumes to nonreporting agencies. The estimation process considers the following: population size covered by the agency; type of jurisdiction, e.g., police department versus sheriff's office; and geographic location.

Estimation of state-level data

In response to various circumstances, the FBI calculates estimated offense totals for certain states. For example, some states do not provide rape figures in accordance with UCR guidelines. In addition, problems at the state level have, at times, resulted in no useable data. Also, the efforts to convert to NIBRS have contributed to the need for unique estimation procedures. A summary of state-specific and offense-specific estimation procedures follows.

State	Year(s)	Reason for Estimation	Estimation Method
Illinois	2000 2001 2002 2003 2004 2005 2006 2007 2008 2009	The state UCR Program was unable to provide complete offense figures in accordance with UCR guidelines.	Valid violent crime and property crime offense counts, with the exception of forcible rape, were available for most of the largest cities (100,000 and over in population). For other agencies, the only available counts generated by the Illinois state UCR Program were state totals based upon an incident-level system without indication of multiple offenses recorded within single incidents. Therefore, the UCR Hierarchy Rule could not be applied in order to convert the state's data to SRS data. (The Hierarchy Rule requires that only the most serious offense in a multiple-offense criminal incident is counted.) To arrive at a comparable state estimate to be included in national compilations, the Illinois state UCR Program's state totals (which were inflated because of the nonapplication of the Hierarchy Rule) were reduced by the proportion of multiple offenses reported within single incidents in the NIBRS database. Valid totals for the large cities were excluded from the reduction process.

	2006 2007 2008 2009	The state UCR Program was unable to provide forcible rape figures in accordance with UCR guidelines.	Forcible rape figures for Rockford include only the forcible rape offenses with female victims that were extracted from the agency's NIBRS data. To derive the state forcible rape estimate, the percentage of female forcible rape victims was extracted from all NIBRS incidents in which a forcible sex offense was reported. That percentage was applied to the forcible rape count received from the Illinois state UCR Program.
Kansas	2000	The state UCR Program was unable to provide complete offense figures in accordance with UCR guidelines.	2000–To arrive at 2000 estimates, 1999 state estimates were updated using 2000 crime trends for the West North Central Division.

Kentucky	2000	The state UCR Program was	2000–To arrive at 2000 estimates, 1999 state totals supplied by the
	2001	unable to provide complete	Kentucky state UCR Program were updated using 2000 crime trends for
	2002	offense figures in accordance	the East South Central Division.
	2003	with UCR guidelines.	
			2001–To arrive at the 2001 estimates, the 2000 state estimates were
			updated using 2001 crime trends reported for the East South Central
			Division.
			2002–To obtain the 2002 state crime counts, the FBI contacted the state
			UCR Program, and the state agency provided their latest state totals,
			2000. Therefore, the 2001 state estimates were updated for inclusion in
			the 2002 edition of Crime in the United States by using the 2001 crime
			trends for the East South Central Division. To derive the 2002 state
			estimate, the 2002 crime trends for the geographic division were applied
			to the adjusted 2001 state estimate.
			2003–To obtain the 2003 estimates, the 2003 crime trends for the East
			South Central Division were applied to adjusted 2002 state estimates.
			The 2002 state counts were reestimated by applying the 2002 crime
			trends for the East South Central Division using more current figures,
			2001 totals provided by the state UCR Program. The adjusted 2002
			estimates differ from the figures published in the 2002 edition of Crime
			<i>in the United States</i> which were originally estimated using 2001 totals.

Minnesota	2005 2006 2007 2008 2009 2010 2011 2012	The state UCR Program was unable to provide forcible rape figures in accordance with UCR guidelines.	 2005–To arrive at a comparable state estimate for forcible rape offenses to be included in national compilations, Minnesota's forcible rape total was estimated by using the national rates per 100,000 inhabitants within the eight population groups and proportionally assigning forcible rape volumes to Minnesota's population groups. 2006-2012–Valid forcible rape figures were available for Minneapolis and St. Paul. To arrive at a comparable state estimate for forcible rape offenses to be included in national compilations, the rest of Minnesota's forcible rape totals were estimated by using the national rates per 100,000 inhabitants within the eight population groups and proportionally assigning forcible rape totals were estimated by using the national rates per 100,000 inhabitants within the eight population groups and proportionally assigning forcible rape volumes to Minnesota's population groups.
Montana	2000	The state UCR Program was unable to provide complete offense figures in accordance with UCR guidelines.	2000–To arrive at 2000 estimates, 1999 state totals supplied by the Montana state UCR Program were updated using 2000 crime trends for the Mountain Division.

Table methodology

The tables in this report are based upon varying levels of data submissions. For example, some participating agencies may submit data for some but not all months of the reporting year. Using well-established procedures, the FBI estimates for missing offense data for agencies with partial reports and for nonreporting agencies and then aggregates these estimates with data reported to determine the number of offenses for each state and the nation. Tables 1-5, 7, and 29 present these approximations. In addition, various circumstances require the FBI to estimate offense totals from time to time for some states. (An explanation of the estimation procedures applied to particular states during specific reporting years is provided in the Offense Estimation section.)

To be included in Tables 8–11 and 21 and 22, which provide statistics for specific jurisdictions and states, agencies must submit 12 months of complete data prior to the FBI's established deadlines. To be included in Table 20, agencies must submit supplementary homicide data. Tables 12–19, 23–28, 30–75, and 77 provide the number of reporting agencies (data source) and the total population covered by their collective jurisdictions. To be included in Tables 78–81, agencies must submit officer and civilian law enforcement employee counts as of October 31. For information on the classification of jurisdictions, see Area Definitions.

(1) Table	(2) Database	(3) Table Construction	(4) General Comments
1–1A	The data used in creating the estimates for these tables were from all law enforcement agencies participating in the UCR Program (including those submitting less than 12 months of data). Crime statistics for the nation include estimated offense totals (except arson) for agencies submitting less than 12 months of offense reports for each year.	These tables provide the estimated number and rate (per 100,000 inhabitants) of reported crimes in the United States for 2000 through 2019, as well as the 2-, 5-, and 10-year trends for 2019 based on these estimates. This table contains estimates based on both the legacy and revised definitions of rape. For the 2019 population estimates used in this table, the FBI computed individual rates of growth from one year to the next for every city/town and county using 2010 decennial population counts and 2011 through 2018 population estimates from the U.S. Census Bureau. Each agency's rates of growth were averaged; that average was then applied and added to its 2018 Census population estimate.	The UCR Program does not have sufficient data to estimate for arson. The crime figures for 2018 have been adjusted from the prior year's publication. In 2013, the FBI's UCR Program initiated the collection of rape data under a revised definition within the Summary Based Reporting System. The term "forcible" was removed from the offense name, and the definition was changed to "penetration, no matter how slight, of the vagina or anus with any body part or object, or oral penetration by a sex organ of another person, without the consent of the victim." In 2016, the FBI Director approved the

The tabular presentation that follows briefly describes the data sources and the methods used to construct Tables 1–81.

			recommendation to discontinue the reporting of rape data using the UCR legacy definition beginning in 2017.
2	The data used in creating the estimates for this table were from all law enforcement agencies participating in the UCR Program (including those submitting less than 12 months of data). Crime statistics for the nation and for community types include estimated offense totals (except arson) for agencies submitting less than 12 months of offense reports for each year.	This table provides estimated crime statistics for the nation, Metropolitan Statistical Areas (MSAs), cities outside metropolitan areas, and nonmetropolitan counties; the rate (per 100,000 inhabitants) for each grouping; and their estimated populations. For MSAs, cities outside metropolitan areas, and nonmetropolitan counties, the table also includes crime statistics by area actually reporting. The statistics under the heading "Area actually reporting" represent offense totals for agencies submitting 12 months of data and estimated totals for agencies submitting less than 12 but more than 2 months of data. The statistics under the heading "Estimated total" represent the totals under "Area actually reporting" plus estimated totals for agencies submitting 2 months or less of data.	The UCR Program does not have sufficient data to estimate for arson. In 2013, the FBI's UCR Program initiated the collection of rape data under a revised definition within the Summary Based Reporting System. The term "forcible" was removed from the offense name, and the definition was changed to "penetration, no matter how slight, of the vagina or anus with any body part or object, or oral penetration by a sex organ of another person, without the consent of the victim." In 2016, the FBI Director approved the recommendation to discontinue the reporting of rape data using the UCR legacy definition

		individual states as shown in Table 5.	beginning in 2017.
		For the 2019 population estimates used in this table, the FBI computed individual rates of growth from one year to the next for every city/town and county using 2010 decennial population counts and 2011 through 2018 population estimates from the U.S. Census Bureau. 			Director approved the recommendation to discontinue the reporting of rape data using the UCR legacy definition beginning in 2017.
20	The data used in creating this table were from all law enforcement agencies that submitted supplementary homicide data for 2019.	This table provides the type of weapons used in murder offenses. The data are based on the aggregated data from agencies within each state for which supplementary homicide data (e.g., weapon information) were reported to the FBI. The table also includes a breakdown of the types of firearms used in murders (i.e., handguns, rifles, shotguns, or firearms [type unknown]). The weapon totals are aggregated from all murders for which the FBI received supplemental homicide data for calendar year 2019.	The supplementary homicide data submitted by the Florida state UCR Program did not meet UCR guidelines and were not included in this table. The FBI received limited supplementary homicide data from the Illinois and Alabama state UCR Programs.
21, 22	The data used in creating these tables were from all law enforcement agencies that submitted complete offense reports for 12 months in 2019.	These tables provide the type of weapons used in robberies (Table 21) and aggravated assaults (Table 22). The tables include the number of agencies that submitted data by state and the population covered by those agencies. The weapon totals are aggregated from all robberies and aggravated assaults for which the FBI received	The FBI received limited weapon data from the Illinois state UCR Program. Limited data for 2019 were received from Alabama and Illinois.

		 weapon breakdowns. For the 2019 population estimates used in this table, the FBI computed individual rates of growth from one year to the next for every city/town and county using 2010 decennial population counts and 2011 through 2018 population estimates from the U.S. Census Bureau. Each agency's rates of growth were averaged; that average was then applied and added to its 2018 Census population estimate to derive the agency's 2019 population estimate. 	
23, 24	The data used in creating these tables were from all law enforcement agencies submitting at least 6 months of complete property/ circumstance data for 2019.	The FBI derives trends by comparing statistics from agencies with at least 6 common months of complete data reports for 2018 and 2019. Table 23 provides an analysis of the crimes of murder, rape, robbery, burglary, larceny-theft, and motor vehicle theft. The table also lists the number of these offenses reported in 2019 and the percentage change in the number of these offenses when compared with 2018 data. The offense of aggravated assault is not included in Table 23. In the UCR Program, the taking of money or property in connection with an assault is reported as robbery.	The FBI presents offense totals for the crimes of murder and rape, and then, based on supplemental data supplied by law enforcement, the FBI computes average value lost totals for the crimes of robbery, burglary, larceny-theft, and motor vehicle theft. The data source from which the FBI derives the information for this table does not include arson. Information regarding the

25-28	The data used in creating	The percent distribution statistics are based on the offense totals for the crimes of robbery, burglary, and larceny-theft. Table 24 provides property types, the reported value of stolen property, and the value of recovered property. This table also lists the percentage of recovered value of each property type. The rape figures in this table are aggregate totals of data submitted using both the legacy and revised definitions of rape. For the 2019 population estimates used in this table, the FBI computed individual rates of growth from one year to the next for every city/town and county using 2010 decennial population counts and 2011 through 2018 population estimates from the U.S. Census Bureau. Each agency's rates of growth were averaged; that average was then applied and added to its 2018 Census population estimate to derive the agency's 2019 population estimate.	average value of property damage due to arson can be found in Arson Table 2. In 2013, the FBI's UCR Program initiated the collection of rape data under a revised definition within the Summary Based Reporting System. The term "forcible" was removed from the offense name, and the definition was changed to "penetration, no matter how slight, of the vagina or anus with any body part or object, or oral penetration by a sex organ of another person, without the consent of the victim." In 2016, the FBI Director approved the recommendation to discontinue the reporting of rape data using the UCR legacy definition beginning in 2017.

	the optimited for this		incluted the concetion of tupe

	table were from all law enforcement agencies submitting 12 months of arrest data for 2019.	The arrest totals presented are national estimates based on the arrest statistics of all law enforcement agencies submitting 12 months of arrest data to the UCR Program. The estimated total number of arrests in this table is the sum of estimated arrest volumes for 27 offenses, not including suspicion. The rape figures in this table are aggregate totals of data submitted using both the legacy and revised definitions of rape. The arrest data for each of the individual offenses in this table is the sum of the estimated volume of arrests for that offense within each of the eight population groups. (See Area Definitions.) The FBI calculated each of the eight population group's arrest estimates by dividing the reported 12- month volume figures (as shown in Table 31) by the contributing agencies' jurisdictional populations. The resulting figure was then multiplied by the total population for each population group as estimated by the UCR Program.	data under a revised definition within the Summary Based Reporting System. The term "forcible" was removed from the offense name, and the definition was changed to "penetration, no matter how slight, of the vagina or anus with any body part or object, or oral penetration by a sex organ of another person, without the consent of the victim." In 2016, the FBI Director approved the recommendation to discontinue the reporting of rape data using the UCR legacy definition beginning in 2017.

		For the 2018 population estimates used in this table, the FBI computed individual rates of growth from one year to the next for every city/town and county using 2010 decennial population counts and 2011 through 2017 population estimates from the U.S. Census Bureau. Each agency's rates of growth were averaged; that average was then applied and added to its 2017 Census population estimate to derive the agency's 2018 population estimate.	Director approved the recommendation to discontinue the reporting of rape data using the UCR legacy definition beginning in 2017.
52-55	The data used in creating these tables were from all metropolitan county law enforcement agencies submitting 12 months of arrest data for 2019.	These tables provide the number of persons arrested in metropolitan counties in 2019 for the offenses for which the UCR Program collects arrest data. The data in Table 52 are broken down by age of the arrestee and include the percent distribution of arrests by offense type. Table 53 supplies the number arrested within the following age groups: Under 15, Under 18, Under 21, and Under 25 years. Table 54 furnishes breakdowns of	These data represent the number of persons arrested; however, some persons may be arrested more than once during a year. Therefore, the statistics in this table could, in some cases, represent multiple arrests of the same person.
		these data by gender for each offense and supplies a percent distribution of males and females arrested	The totals provided in Table 55

			beginning in 2017.
56, 57	The data used in creating these tables were from all nonmetropolitan county law enforcement agencies submitting 12 months of arrest data for both 2018 and 2019.	These 2-year trend tables provide the number of persons arrested in nonmetropolitan counties in $201\underline{87}$ and $201\underline{98}$ and the percent change when the data for these 2 years are compared. Table 56 furnishes a breakdown of these data by juveniles (persons under age 18) and adults. Table 57 furnishes a breakdown of these data by gender for juveniles. Rape figures in this table are aggregate totals of data	These data represent the number of persons arrested; however, some persons may be arrested more than once during a year. Therefore, the statistics in this table could, in some cases, represent multiple arrests of the same person.
		submitted using both the legacy and revised definitions of rape. For the 2019 population estimates used in this table, the FBI computed individual rates of growth from one year to the next for every city/town and county using 2010 decennial population counts and 2011 through 2018 population estimates from the U.S. Census	In 2013, the FBI's UCR Program initiated the collection of rape data under a revised definition within the Summary Based Reporting System. 		2010 decennial population counts and 2011 through 2018 population estimates from the U.S. Census Bureau. Each agency's rates of growth were averaged; that average was then applied and added to its 2018 Census population estimate to derive the agency's 2019 population estimate.	In constructing this table, the FBI accepted each individual state's age definition for juveniles.
69	The data used in creating this table were from all law enforcement agencies that submitted 12 months of arrest data for 2019.	This table provides arrest data for the offenses for which the UCR Program collects data and is broken down by state for 2019. The table provides both total arrests and arrests of juveniles (persons under the age of 18). Arrest totals are aggregates of the totals reported by agencies providing data to the UCR Program within each state.	These data represent the number of persons arrested; however, some persons may be arrested more than once during a year. Therefore, the statistics in this table could, in some cases, represent multiple arrests of the same person.
		Rape figures in this table are aggregate totals of data submitted using both the legacy and revised definitions of rape.	Any comparison of statistics in this table should take into consideration variances in arrest practices, particularly for Part II crimes. (Offenses in Uniform
		For the 2019 population estimates used in this table,	crimes. (Onenses in Uniform

Each agency's rates of growth were averaged; that average was then applied and added to its 2018 Census population estimate to derive the agency's 2019 population estimate.	Crime Reporting defines the UCR Program's Part II offenses.)
tab enf cou 201	the information in this pole is derived from law forcement employee unts (as of October 31, 019) submitted by rticipating agencies.	This table provides the number and rate per 1,000 inhabitants of law enforcement employees broken down by region, geographic division, and population group. The totals for full-time law enforcement employees in metropolitan and nonmetropolitan counties are combined in this table. For the 2019 population estimates used in this table, the FBI computed individual rates of growth from one year to the next for every city/town and county using 2010 decennial population counts and 2011 through 2018 population estimates from the U.S. Census Bureau. Each agency's rates of growth were averaged; that average was then applied and added to its 2018 Census population estimate to derive the agency's 2019 population estimate.	The UCR Program defines law enforcement officers as individuals who ordinarily carry a firearm and a badge, have full arrest powers, and are paid from governmental funds set aside specifically to pay sworn law enforcement. Civilian employees include full- time agency personnel such as clerks, radio dispatchers, meter attendants, stenographers, jailers, correctional officers, and mechanics.

71	The information in this table is derived from law enforcement officer counts (as of October 31, 2019) submitted by participating agencies.	This table provides the number and rate per 1,000 inhabitants of sworn law enforcement officers broken down by region, geographic division, and population group. The totals for full-time law enforcement officers in metropolitan and nonmetropolitan counties are combined in this table. For the 2019 population estimates used in this table, the FBI computed individual rates of growth from one year to the next for every city/town and county using 2010 decennial population counts and 2011 through 2018 population estimates from the U.S. Census Bureau. Each agency's rates of growth were averaged; that average was then applied and added to its 2018 Census population estimate.	The UCR Program defines law enforcement officers as individuals who ordinarily carry a firearm and a badge, have full arrest powers, and are paid from governmental funds set aside specifically to pay sworn law enforcement.
72	The information in this table is derived from law enforcement employee counts (as of October 31, 2019) submitted by participating agencies.	This table includes the number of agencies that fall within specified rate ranges of employment by population group for law enforcement personnel, both sworn officers and civilian employees. The FBI derived the rate of full-time law enforcement employees per population group by first dividing the aggregated total of personnel for the group by the	The UCR Program defines law enforcement officers as individuals who ordinarily carry a firearm and a badge, have full arrest powers, and are paid from governmental funds set aside specifically to pay sworn law

		aggregated estimated populations covered by the contributing agencies within the group and then multiplying the resulting figure by 1,000. For the 2019 population estimates used in this table, the FBI computed individual rates of growth from one year to the next for every city/town and county using 2010 decennial population counts and 2011 through 2018 population estimates from the U.S. Census Bureau. Each agency's rates of growth were averaged; that average was then applied and added to its 2018 Census population estimate to derive the agency's 2019 population estimate.	enforcement. Civilian employees include full- time agency personnel such as clerks, radio dispatchers, meter attendants, stenographers, jailers, correctional officers, and mechanics. Agencies with no resident population; i.e., those associated with universities and colleges (see Table 79), other agencies (see Table 81), and some state agencies; are excluded from this table. Therefore, the total number of agencies used in this table differs from that provided in other law enforcement employee tables.
73	The information in this table is derived from law enforcement officer counts (as of October 31, 2019) submitted by participating agencies.	This table includes the number of agencies that fall within specified rate ranges of employment by population group for law enforcement officers. 75	The information in this table is derived from civilian law enforcement counts (as of October 31, 2019) submitted by participating agencies.	This table includes data about civilian law enforcement employees by population group. For the 2019 population estimates used in this table, the FBI computed individual rates of growth from one year to the next for every city/town and county using 2010 decennial population counts and 2011 through 2018 population estimates from the U.S. Census Bureau. Each agency's rates of growth were averaged; that average was then applied and added to its 2018 Census population estimate to derive the agency's 2019 population estimate.	Civilian employees include full- time agency personnel such as clerks, radio dispatchers, meter attendants, stenographers, jailers, correctional officers, and mechanics.
76	The information in this table is derived from law enforcement employee counts (as of October 31, 2019) submitted by participating agencies.	This table provides the number of state law enforcement employees, the number of male officers, the number of female officers, the number of male civilian employees, and the number of female civilian employees listed alphabetically by state.	The UCR Program defines law enforcement officers as individuals who ordinarily carry a firearm and a badge, have full arrest powers, and are paid from governmental funds set aside specifically to pay sworn law enforcement. Civilian employees include full-

			time agency personnel such as
			clerks, radio dispatchers, meter
			attendants, stenographers,
			jailers, correctional officers, and
			mechanics.
			Caution should be used when
			comparing data from one state
			to that of another. The
			responsibilities of the various
			state police, highway patrol, and
			department of public safety
			agencies range from full law
			enforcement duties to only
			traffic patrol, which can impact
			both the level of employment for
			agencies as well as the ratio of
			sworn officers to civilians
			employed. Any valid comparison
			must take these factors and the
			other identified variables
			affecting crime into
			consideration.
