

## Data Declaration

### Arrestees

#### Sex

#### by Arrest Offense Category, 2014

The FBI collected these data through the Uniform Crime Reporting (UCR) Program's National Incident-Based Reporting System (NIBRS).

#### General Comment

This table shows the number of arrestees in each gender category by the arrest offense category to which they are connected. The 23 offense categories shown for Crimes Against Persons, Crimes Against Property, and Crimes Against Society are comprised of 49 offense types. In addition, this table includes 12 Group B offenses for which only arrests may be reported.

#### Methodology

- The UCR Program counted each arrestee associated with an incident. In addition, for 2014, the UCR Program counted each arrestee reported through only an arrest report.
- The arrestee data were aggregated by sex and broken down by their associated arrest offense categories. Figures in the Unknown column represent the number of arrestees whose gender was unknown.
- Arrest offense categories include the offense types for which agencies arrested individuals, but they are not necessarily the same offense types as initially reported in the incidents. Therefore, users should exercise caution when comparing data for offenders by offense category in other tables with data for arrestees by arrest offense category in this table.
- This table does not include duplicate data for arrestees who were reported to have been involved in more than one incident and, therefore, had arrestee reports submitted with multiple incident reports.

**Note:** In previous years' arrestee tables, arrestees for Group B offenses were included only if they were connected to a Group A offense, i.e., an offense in one of the 23 offense categories shown for Crimes Against Persons, Crimes Against Property, or Crimes Against Society in this table. For 2014, arrestees whose data were submitted only through Group B Arrest Reports were included to show all arrestees reported to the UCR Program via NIBRS.
