

Data Declaration

Federal Agencies Offense Type by Agency, 2019

The FBI collected these data through the Uniform Crime Reporting (UCR) Program's National Incident-Based Reporting System (NIBRS).

General Comment

This table provides the number of offenses as reported by each federal law enforcement agency (LEA) that contributed data to the UCR Program via NIBRS. Offense totals are presented for each crime category, as well as for the 23 offense categories, which are comprised of 52 offense types. (As recommended by the Criminal Justice Information Services Advisory Policy Board, the UCR Program combined the offense categories of Sex Offenses [formerly Forcible] and Sex Offenses, Nonforcible. Beginning with the 2018 data, all offense types previously published in those two categories are now published in one category as Sex Offenses.)

Note

Data for the federal agencies published in this table and the U.S. table in *NIBRS, 2019*, are more expansive than the data published for the same agencies in Federal Crime Data, a report within *Crime in the United States, 2019*. Those data were converted for the Summary Reporting System using the Hierarchy Rule, which counts only the most serious crime in multiple-offense incidents. In addition, the SRS does not specify as many offense types as NIBRS does.

Methodology

- The data used in creating this table were from all federal law enforcement agencies that submitted 12 months of data to the UCR Program via NIBRS.
- This table provides the aggregate number of offenses by their respective crime categories of Crimes Against Persons, Crimes Against Property, and Crimes Against Society. It also supplies the number of offenses that each LEA reported using the following counting rules:
 - Crime Against Person—one for each victim.
 - Crime Against Property—one for each unique offense type.
 - Crime Against Society—one for each unique offense type.
